Jobia

iOS Practical Workshop

Will build Jobia like Application from Scratch, VOLA
🔥

Session 3 Notes

- We got to know how the navigation could be handled and built NavigtionRoute system.

- Learned how to manage our layers dependencies using Resolver.

Taking Home Task

- Try setting up different dependencies between different layers.
- Try implementing mock objects using Resolver.

I hope we covered all things related to Clean Architecture setup and MVP on the presentation layer. And here is our assets for Session 2:

1. Video Progress
2. Project on Github (our progress on this session will be in tag 0.3)

Thank you.
